

Technological Firsts

We are proud to announce technical breakthroughs first seen in our products:

Playback Designs 8FS USB Interface

While there may be a few companies that make claims that they have an 8FS USB interface, they likely have to downsample the data inside the DAC because they use a standard off-the-shelf DAC chip set that is limited to 4FS. Due to our discrete DAC technology, we, truly do 8FS. In fact it is designed to receive any sample rate up 12.2MHz. This technology makes our products future proof for many years, if not decades.
